

# Development Team

---

IT team makes the heart of our company. It is a group of people made of experienced individuals supported by talented young developers ready to respond to all the challenges set by the company or the market. For developing solutions they are using the latest utilities and technologies such as:

- ▶ Programming languages: C/C++, C#, Java, Visual Basic, ASP.NET, PHP, XML, (X)HTML, JavaScript (Ajax), Delphi, PL/SQL(TSQL)
- ▶ Developing tools: MS Visual Studio.Net, Eclipse, NetBeans, Borland Delphi, MS Team Foundation Server, TestComplete, Continuous build server (Luntbuild), Code quality inspection (Sonar)
- ▶ Frameworks: MS.Net Framework, Selenium
- ▶ Database System Management: Oracle, Microsoft SQL Server, MySQL
- ▶ Operating Systems: Windows, Linux....

## Development Team

---

We have vast experience in telecommunication especially in developing Voice and SMS services. We have also developed a significant number of complex Internet applications of which some include custom streaming.

Taking part and backing the expansion of the market and the potential of new technologies, we invested significant amount of time and resources in developing Android applications.

A large part of our products is working in real time with 24 hours constant load of over hundred thousands records. For some extreme situations that require such a support we developed solutions that can stand over 5000 records per second.

Over 400 companies successfully operating  
with our solutions and technical support.
